

Release Note for Vigor2135 Series

| | |
|-------------------|---------------------------------------------------------|
| Firmware Version: | 4.3.1 |
| Release Type: | Normal |
| Applied Models: | Vigor2135 / Vigor2135Vac / Vigor2135FVac Vigor2135ac |

Vigor2135 features advanced bandwidth control mechanism such as IP-layer, QoS, NAT Session Limitation, Bandwidth Borrowed, etc., to allow easy, flexible, reliable access control and bandwidth management.

New Features

- Support WPA3/OWE for wireless LAN 2.4G/5G.
- Support Mesh (for "ac" model only).
- Support Hardware Acceleration QoS.
- Support VPN Graph (on Diagnostics).
- Support VPN Matcher.
- Support TOTP(2FA) authentication mechanism for administrator password setup.

Improvement

- Improved: Optimize the web pages of LAN DNS and DNS Forwarding.
- Improved: Support schedule profiles, for the function of Remote Dial-In User (on VPN and Remote Access).
- Improved: Support hostname setting used on Access List from the Internet (System Maintenance>>Management).
- Corrected: An issue of LAN DNS operation.
- Corrected: An issue of router reboot for wired 802.1X.
- Corrected: An issue of uploading OpenVPN configuration file.
- Corrected: Display error issues related to IPv4/IPv6 Sessions Limits (on Bandwidth Management).
- Corrected: An issue of Access List not working for Management from the Internet when SSL VPN Service was enabled.

Note

- None.

Known Issue

- Do not downgrade the firmware of Vigor router to 4.2.1, if subnet 3 and 4 are enabled.
