

Release Note for VigorAP 905

Firmware Version:	5.1.1
Release Type:	Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations
Applied Models:	VigorAP 905

VigorAP 905 is 11ax dual-band wireless mesh access point with a 5-port LAN switch, which port A1 supports 802.3af/at PoE-In. It provides the flexibility and advanced features for professional users to take full management of the wireless network, including the mesh technology, which aims for providing an easy way to expand the wireless network in minutes.

New Features

- Support TR-369 over MQTT(Message Queuing Telemetry Transport).

Improvement

- Improved: Add to support to hide the Enable command.
- Corrected: An issue where deleting External RADIUS entries failed.
- Corrected: An issue where local service certificate settings reverted to default after a reboot.
- Corrected: An issue where the notification icon on the Main Dashboard did not display any notifications.
- Corrected: An issue where the Node Device Configuration failed with error message "Field operation failed(lost, duplicated, type...etc)".
- Corrected: An issue where TR-069 settings were not automatically saved after being pushed through the router's Wireless Virtual Controller.

Known Issue

- None.

Notes

- None.
