

Release Note for VigorPhone 350

Firmware Version: 12202.26.1.06

Built Date: September 17, 2010

Applied Models: VigorPhone 350

VigorPhone enables you to make phone calls through the IP network instead of calling through a tradition local PSTN line.

It is workable with VigorIPPBX series for auto provision capability. To manage various calling purposes, VigorPhone supports multi-SIP registration with different accounts (up to 10) and support G.722 codec for promoting voice quality. The simple WEB UI based configuration allows you to operate VigorPhone with ease.

New Features

- None

Improvement

- Fixed: VigorPhone 350 uses wrong codec to send RTP, and Codec Negotiation Behavior changes on 200 OK with SDP (SIP stack)
- Fixed: VigorPhone 350 uses the "to tag" information of 200 OK.
- Fixed: VigorPhone 350 drops the incoming call automatically and does not send "CANCEL" to let the caller know that the call is cancelled.
- Fixed: When press the "reject" button, VigorPhone 350 will send "487 cancel" not "486 busy".
- Fixed: VigorPhone 350 sends Notify to PBX for several times when the BLF function is enabled.
- Fixed: Beep indication when there is a second incoming call.

Known Issue

- Upgrading VigorPhone 350 to firmware version 12202.26.1.06 will cause device configuration reset to default. Please backup the System Configuration before upgrading to 12202.26.1.06 and restore the file after the device successfully upgraded to 12202.26.1.06.

Notes

- If the firmware of the device is 12202.26.1.03 or earlier, please upgrade the VigorPhone 350 to 12202.26.1.04 before performing device firmware upgrade to 12202.26.1.06.
